## **Factsheet sisMAN**

## BoSch Data

BoSch Data GmbH is a certified Microsoft Dynamics partner offering a variety of solutions for Microsoft Dynamics 365 Business Central.

The applications range from individual modules to comprehensive solution packages in the areas of soil, building materials, and commodities/shipping.

Development focuses on providing excellent usability for end users.

New functions extend the scope of existing solutions or create entirely new possibilities for users.

## BoSch Data – sisMAN App

The sisMAN App is a fully integrated solution for Microsoft Dynamics 365 Business Central.

As a sales information system for building projects, it provides a structured overview of opportunities, stakeholders, and products.

Managing photos and project areas based on responsibility centers gives users a clear and comprehensive view of upcoming construction projects.

At the **object** level, you can:

- Create opportunities per object or per responsibility center (e.g. for separate building parts)
- Define your contributors – the key stakeholders of the building project
- Specify items (individually or by item category) needed for each project
- Log interactions and communication with stakeholders
- Assign and manage tasks for your building projects
- Archive different versions of building objects

You can use the **object entity** to:

- Link sales and purchase orders directly to building objects
- Assign services and items to jobs with project references
- Set up individual sales and purchase price lists per object
- Get a complete overview using the Object Manager Role Center
